

Solution Requirements

Date	24 June 2026
Team ID	SWTID-2026-1236
Project Name	Credit Card Approval Eligibility
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

- **Functional Requirements (FR)** : Define specific behaviours, functions, or features of the system.
- **Non-Functional Requirements (NFR)** : Specify the criteria that judge the operation of a system, rather than specific behaviours.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	No authentication is required. Users can directly access the website and submit the application form.	Low
2	Authorization levels	No user roles or access levels are implemented since the application is publicly available.	Low
3	External interfaces	The web application connects to the AI & ML prediction model and the database to process and store application data.	High

4	Transactions processing	The system receives customer details, processes them using the AI model, stores the data securely, and displays the prediction result.	Medium
5	Reporting	The system displays the credit card approval or rejection result to the customer and the reason behind the decision on the website.	High
6	Business rules, etc.	The AI & ML model predicts approval based on the customer's information. Applications with missing or invalid details are not provides you the incorrect results.	Medium
7	Compliance to laws or regulations	Customer information is stored securely, and data privacy is maintained.	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The website should quickly process customer applications and display results.	Result displayed within 5 seconds
2	Scalability	The system should support multiple users submitting applications simultaneously.	Supports 100+ concurrent users

3	Security & Data Privacy	Customer information is not stored in our databases.	None of the customers data stored in our databases
4	Reliability & Availability	The website should be available whenever users access it.	99% uptime
5	Usability & Accessibility	The application should have a simple, responsive, and user-friendly interface.	Easy to use on desktop and mobile devices
6	<i>Other</i>	The system should be easy to maintain and update with improved AI models in the future.	Modular and maintainable design
