

Scalability & Future Plan

Date	2 July 2026
Team ID	SWTID-2026-1236
Project Name	Credit Card Approval Eligibility
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	The prediction model is trained on a limited dataset.	Prediction accuracy may decrease for unseen or diverse user profiles.	High
2	The application is designed for moderate traffic.	Performance may reduce if many users access the system simultaneously.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Supports a moderate number of users	Upgrade hosting resources and use load balancing to support more concurrent users.
2	Data Storage	No long-term storage of user records.	Integrate a scalable cloud database to securely store and manage prediction history.
3	Performance	Single Machine Learning model processes all predictions.	Optimize the model and backend to reduce response time and improve efficiency.
4	Security	Basic input validation is implemented.	Add user authentication, HTTPS security, and encryption for sensitive data in future versions.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 1	Improve Machine Learning model accuracy using additional training data.	1–2 Months	More accurate eligibility predictions
Phase 2	Support eligibility prediction for other financial products such as loans	2–3 Months	Expands the scope of the application
Phase 3	Implement user accounts, prediction history, and advanced security features.	2–3 Months	Improves user experience and enhances data security
